PROFESSIONAL SUMMARY

Final-year Computer Engineering student with hands-on experience developing Python web applications and AI-enabled solutions using Django, REST APIs, and SQL. Experienced in integrating machine-learning workflows, LLM-based features, GitHub APIs, and asynchronous background tasks. Solved 350+ LeetCode problems, strengthening algorithmic thinking and problem-solving skills.

TECHNICAL SKILLS

Programming: Python, JavaScript (ES6+), SQL, HTML5, CSS3
Web: Django, Django REST Framework, React.js, Bootstrap, Tailwind CSS, REST APIs
AI/ML: LLM Integration, RAG, Prompt Engineering, scikit-learn, XGBoost, ONNX Runtime
Databases & Tools: PostgreSQL, SQLite, Git, GitHub, Celery, Redis
Problem Solving: Data Structures and Algorithms

EDUCATION

B.Tech – Computer Engineering 2023 – 2027
GF's Godavari College of Engineering, Jalgaon, Maharashtra

INTERNSHIP

Python Full Stack Developer Intern – Kiran Academy Apr 2025 – Nov 2025

- Completed a six-month, project-based full-stack program covering Python, Django, SQL, and REST API development.
- Built and debugged web application features across frontend and backend components.

PROJECTS

AgriDefenderX – AI-Powered Crop Disease Advisory Platform *SIH 2026*
Python, Django, DRF, XGBoost, scikit-learn, TF-IDF RAG, Tailwind CSS, Leaflet.js *GitHub*

- Developed a Django platform for farmers, agricultural experts, and officers, supporting crop-report submission, role-based access, and expert review workflows.
- Built a disease-report pipeline combining image-classifier output with weather, crop growth stage, recent pest-trap activity, and nearby confirmed cases; used an XGBoost model to assign LOW, MEDIUM, or HIGH risk levels.
- Implemented TF-IDF retrieval over a curated integrated pest-management knowledge base to generate grounded advisories with source references and avoid unsupported treatment instructions.
- Automated escalation of low-confidence or high-risk reports for expert validation, with expert corrections exportable as labeled data for future model training.
- Added Marathi/Hindi advisory translation, text-to-speech output, and an officer dashboard with a Leaflet-based disease hotspot map and filters.

ReviewHawk – AI-Powered GitHub Pull Request Reviewer *Team Project, 2026*
Python, Django, DRF, PostgreSQL, Celery, Redis, GitHub API, Gemini, tree-sitter *GitHub*

- Developed a GitHub-connected review platform with repository registration and webhook-based processing of pull-request events.
- Implemented a Django webhook receiver with HMAC-SHA256 signature validation, delivery tracking, and duplicate-event handling before creating pull-request review records.
- Integrated Gemini to analyze pull-request diffs and generate structured findings with severity levels, explanations, and suggested fixes; mapped findings to changed lines and published inline GitHub review comments.
- Built tree-sitter static checks for Python issues including unused imports, oversized functions, bare exception handling, deep nesting, and hardcoded secrets; combined and deduplicated static and LLM findings.
- Used Celery and Redis to run reviews asynchronously with retry handling, while persisting review status and results in PostgreSQL.

CERTIFICATIONS

DBMS (Database Management System)– NPTEL
Python for Data Science – NPTEL
Soft Skills and Personality – NPTEL
